
Volume 31 Contents

Volume 31 Number 1 January 2003

An engineer's approach to a general algorithm for finding the sum of powers of natural numbers R Venkatachalam and Umesh Chandra Sharma

Overconsumption as an ethical challenge for engineering education

J. C. Swearingen and E. J. Woodhouse

Chemical reactions and gaseous equilibrium J. D. Lewins

Thermal engineering design project: a calorimeter that measures the specific heat of aluminum R. S. Mullisen

Application of some results on proportionally damped systems to a uniform n -mass oscillator M Gürgöze

Visual aid depicting mechanical vibration systems to enhance student learning M. Hoorfar, H. Najjaran and W. L. Cleghorn

Volume 31 Number 2 April 2003

A teaching program for gaseous equilibrium J. D. Lewins

A study on the combined effect of axle friction and rolling resistance

Murat Sönmez

Mean temperature of heat reception as applied to the Rankine cycle

Peter E. Liley

Teaching manufacturing systems integration through data modelling and network exchange simulation George C. Vosniakos

On the curvature of a Euler-Bernoulli beam Osman Kopmaz and Ömer Gündoğdu

A computer-generated 'pseudo-experiment' in fluid mechanics R. C. F. Dye

Comparative studies: CFD, experimental and analytical techniques in the fluids laboratory W. A. Bullough, J. H. Hart and S. B. Chin

Experimental comparison of heat transfer enhancement methods in heat exchangers Hosni I. Abu-Mulaweh

On the analysis of small displacements of truss joints Clive L. Dym and Harry E. Williams

The effect of mean stress components in high-cycle, biaxial fatigue

Edgar G. Munday

Volume 31 Number 3 July 2003

Optimising an intercooled compressor for an ideal gas model

Jeffery D. Lewins

A novel approach to the teaching of planar mechanism dynamic – a case study Rosario Sinatra and Jorge Angeles

On springs and matrices Eli Altus

The centre of twist for a prismatic bar under free torsion Shuguang Li

The RC analogy provides a versatile computational tool for unsteady, unidirectional heat conduction in regular solid bodies cooled by adjoining fluids
Antonio Campo and Francisco Alhama

Identification of parameters W_0 , n , and D of the Dubinin–Radushkevich equation A. Nour, H. Tazerouti and Y. Ouragh

Availability analysis of single-component systems with various failure and repair distributions Singiresu S. Rao and David E. Foster

Integration of boiling experiments in the undergraduate heat transfer laboratory Hosni I. Abu-Mulaweh and Josué Njock Libii

Volume 31 Number 4 October 2003

Thermodynamics of radiation Jeffery D. Lewins

Three-directional grating and application in measuring residual stresses
JuBing Chen

A slider-crank experiment to determine the action of static forces T. W. Ng

Mechanical engineering curricula: a baseline study for the future effects of ABET EC2000 Colonel Wayne E. Whiteman, PhD, PE

An open oscillatory heat pipe steam-powered boat R. T. Dobson

Utilization of the PSPICE code for the unsteady thermal response of composite walls in a heat transfer course Francisco Alhama and Antonio Campo

Stress characterization of autofrettaged thick-walled cylinders J. M. Kihui, S. M. Mutuli and G. O. Rading

Thermal engineering design project: a calorimeter that measures the specific heat of aluminum – part 2 R. S. Mullisen
